ICD-10-CM Coding for Parkinson's Disease

Complications of Parkinson's disease

ICD-9-CM Coding

ICD-10-CM Coding

always remember...

• ICD-10-CM coding conventions require that the underlying condition (etiolog y) code be sequenced first, followed by the manifestation code or codes.
• Whenever a condition requires etiology and manifestation codes, there is a “use additional code” note following the etiology code and a “code first” note following the manifestation code.
• Example: Dementia without behavioral disturbances in Parkinson's disease:

Etiology – G20 Parkinson's disease

Manifestation – F02.80 Dementia in diseases classified elsewhere without behavioral disturbance

Diseases

Depression
Sleep disorders

F02.80  Dementia in other diseases classified elsewhere without behavioral disturbance

Note: Code G31.83 requires a second code, either F02.80, Dementia without behavioral disturbance or F02.81, Dementia in other diseases classified elsewhere with behavioral disturbance (use additional code, if applicable, to identify wandering in conditions classified elsewhere, V40.31). If the behavioral disturbance is not documented, the default is V40.31. If the behavioral disturbance is not documented, the default is F02.80.

G20 Parkinson's disease

F02.80 Dementia in other diseases classified elsewhere without behavioral disturbance

Complications of Parkinson's disease

G20 Parkinson's disease

Paralysis agitans (Parkinsonism or Parkinson's disease)
Secondary Parkinsonism
Other degenerative disorders of the basal ganglia (Parkinsonian syndrome assoc. with orthostatic hypotension)
Huntington's chorea

See category G21 for Secondary Parkinsonism (multiple code choices)

G20 Parkinson's disease

F02.80 Dementia in other diseases classified elsewhere without behavioral disturbance

Note: Code G31.83 requires a second code, either F02.80, Dementia in other diseases classified elsewhere without behavioral disturbance or F02.81, Dementia in other diseases classified elsewhere with behavioral disturbance (use additional code, if applicable, to identify wandering in conditions classified elsewhere, V40.31). If the behavioral disturbance is not documented, the default is V40.31. If the behavioral disturbance is not documented, the default is F02.80.

Coding Example: Dementia without behavioral disturbances in Parkinson's disease

G20 Parkinson's disease

Optum does not warrant that this easy reference guide, supplied for informational purposes, is complete, accurate or free from defects; the ICD-9-CM and ICD-10-CM code books are the authoritative references. Specific documentation is reflective of the “thought process” of the provider when treating patients. All conditions affecting the care, treatment or management of the patient should be documented with their status and treatment and coded to the highest level of specificity. Enhanced precision and accuracy in the codes selected is the ultimate goal. In 2013, CMS announced an “updated, clinically revised CMS-HCC risk adjustment model” that differs from the proposed model. See www.cms.gov/Medicare/Health-Plans/MedicareAdvtgSpecRateStats/Downloads/Announcements2014.pdf. www.cms.gov/ Medicare/Health-Plans/MedicareAdvtgSpecRateStats/index.html

From the ICD-10-CM Official Guidelines for Coding and Reporting 2014 by The Centers for Medicare and Medicaid Services (CMS) and the National Center for Health Statistics (NCHS): "A dash (-) at the end of an Alphabetic Index entry indicates that additional characters are required. Even if a dash is not included at the Alphabetic Index entry, it is necessary to refer to the Tabular List to verify that no 7th character is required."
