Introduction

Welcome to Optum360's Current Procedural Coding Expert, an exciting Medicare coding and reimbursement tool and definitive procedure coding source that combines the work of the Centers for Medicare and Medicaid Services, American Medical Association, and Optum360 experts with the technical components you need for proper reimbursement and coding accuracy. Handy snap in tabs are included to indicate those sections used most often for easy reference.

This approach to CPT® Medicare coding utilizes innovative and intuitive ways of communicating the information you need to code claims accurately and efficiently. Includes and Excludes notes, similar to those found in the ICD-10-CM manual, help determine what services are related to the codes you are reporting. Icons help you crosswalk the code you are reporting to laboratory and radiology procedures necessary for proper reimbursement. CMS-mandated icons and relative value units (RVUs) help you determine which codes are most appropriate for the service you are reporting. Add to that additional information identifying age and sex edits, ambulatory surgery center (ASC) and ambulatory payment classification (APC) indicators, and Medicare coverage and payment rule citations, and Current Procedural Coding Expert provides the best in Medicare procedure reporting.

Current Procedural Coding Expert includes the information needed to submit claims to federal contractors and most commercial payers, and is correct at the time of printing. However, CMS, federal contractors, and commercial payers may change payment rules at any time throughout the year. Current Procedural Coding Expert includes effective codes that will not be published in the AMA's Physicians' Current Procedural Terminology (CPT) book until the following year. Commercial payers will announce changes through monthly news or information posted on their websites. CMS will post changes in policy on its website at http://www.cms.gov/transmittals. National and local coverage determinations (NCDs and LCDs) provide universal and individual coverage. CMS-mandated icons and relative value units (RVUs) help you determine which codes are most appropriate for the service you are reporting. Add to that additional information identifying age and sex edits, ambulatory surgery center (ASC) and ambulatory payment classification (APC) indicators, and Medicare coverage and payment rule citations, and Current Procedural Coding Expert provides the best in Medicare procedure reporting.

Current Procedural Coding Expert is an exciting tool combining the most current material at the time of our publication from the AMA's CPT 2020, CMS's online manual system, the Correct Coding Initiative, CMS fee schedules, official Medicare guidelines for reimbursement and coverage, the Integrated outpatient coding Editor (I/OCE), and Optum360's own coding expertise.

These coding rules and guidelines are incorporated into more specific section notes and code notes. Section notes are listed under a range of codes and apply to all codes in that range. Code notes are found under individual codes and apply to the single code.

Material is presented in a logical fashion for those billing Medicare, Medicaid, and many private payers. The format, based on customer comments, better addresses what customers tell us they need in a comprehensive Medicare procedure coding guide.

Designed to be easy to use and full of information, this product is an excellent companion to your AMA CPT manual, and other Optum360 and Medicare resources.

For mid-year code updates, official errata changes, correction notices, and any other changes pertinent to the information in Current Procedural Coding Expert, see our product update page at https://www.optum360coding.com/ProductUpdates/.

Note: The AMA releases code changes quarterly as well as errata or corrections to CPT codes and guidelines and posts them on their website. Some of these changes may not appear in the AMA's CPT book until the following year. Current Procedural Coding Expert incorporates the most recent errata or release notes found on the AMA's website at our publication time, including new, revised and deleted codes. Current Procedural Coding Expert identifies these new or revised codes from the AMA website errata or release notes with an icon similar to the AMA's current new ▲ and revised ▼ icons. For purposes of this publication, new CPT codes and revisions that won’t be in the AMA book until the next edition are indicated with a ● and a ▲ icon. For the next year's edition of Current Procedural Coding Expert, these codes will appear with standard black new or revised icons, as appropriate, to correspond with those changes as indicated in the AMA CPT book. CPT codes that were new for 2019 and appeared in the 2019 Current Procedural Coding Expert but did not appear in the CPT code book until 2020 are identified in appendix B as “Web Release New and Revised Codes.”

General Conventions

Many of the sources of information in this book can be determined by color.

- All CPT codes and descriptions and the Evaluation and Management guidelines from the American Medical Association are in black text.
- Includes, Excludes, and other notes appear in blue text. The resources used for this information are a variety of Medicare policy manuals, the National Correct Coding Initiative Policy Manual (NCCI),AMA resources and guidelines, and specialty association resources and our Optum360 clinical experts.

Resequencing of CPT Codes

The American Medical Association (AMA) uses a numbering methodology of resequencing, which is the practice of displaying codes outside of their numerical order according to the description relationship. According to the AMA, there are instances in which a new code is needed within an existing grouping of codes but an unused code number is not available. In these situations, the AMA will resequence the codes. In other words, it will assign a code that is not in numeric sequence with the related codes. However, the code and description will appear in the CPT manual with the other related codes.

An example of resequencing from Current Procedural Coding Expert follows:

- 21555 Excision, tumor, soft tissue of neck or anterior thorax, subcutaneous; less than 3 cm
- 21552 3 cm or greater
- 21566 Excision, tumor, soft tissue of neck or anterior thorax, subfascial (eg, intramuscular); less than 5 cm
- 21554 5 cm or greater

In Current Procedural Coding Expert the resequenced codes are listed twice. They appear in their resequenced position as shown above as well as in their original numeric position with a note indicating that the code is out of numerical sequence and where it can be found. (See example below.)

- 21554 Resequenced code. See code following 21556.

This differs from the AMA CPT book, in which the coder is directed to a code range that contains the resequenced code and description, rather than to a specific location.

51100-51102 Bladder Aspiration Procedures

51100  Aspiration of bladder; by needle
- (76942, 77002, 77012)
- 1.13  ~  1.84  FUD  000
- AMA: 2018, Jan, 8; 2017, Jan, 8; 2016, Jan, 13; 2015, Jan, 16; 2014, Jan, 11

51101  by trocar or intracatheter
- (76942, 77002, 77012)
- 1.50  ~  3.79  FUD  000
- AMA: 2018, Jan, 8; 2017, Jan, 8; 2016, Jan, 13; 2015, Jan, 16; 2014, Jan, 11

51102  with insertion of suprapubic catheter
- (76942, 77002, 77012)
- 4.18  ~  6.60  FUD  000
- AMA: 2018, Jan, 8; 2017, Jan, 8; 2016, Jan, 13; 2015, Jan, 16; 2014, Jan, 11

51500-51597 Open Excisional Procedures of Bladder

51500  Excision of urachal cyst or sinus, with or without umbilical hernia repair
- 16.4  ~  18.4  FUD  090
- AMA: 2014, Jan, 11

51520  Cystotomy; for simple excision of vesical neck (separate procedure)
- 17.2  ~  17.2  FUD  090
- AMA: 2014, Jan, 11

51525  for excision of bladder diverticulum, single or multiple (separate procedure)
- FUD
- AMA: 2014, Jan, 11

51530  for excision of bladder tumor
- FUD
- AMA: 2014, Jan, 11

51535  Cystotomy for excision, incision, or repair of ureterocele
- FUD
- AMA: 2014, Jan, 11

51550  Cystectomy, partial; simple
- 219  ~  27.9  FUD  090
- AMA: 2014, Jan, 11

51555  complicated (eg, postradiation, previous surgery, difficult location)
- 36.6  ~  36.6  FUD  090
- AMA: 2014, Jan, 11

51565  Cystectomy, partial, with reimplantation of ureter(s) into bladder (ureteroneocystostomy)
- 37.5  ~  37.5  FUD  090
- AMA: 2014, Jan, 11

51570  Cystectomy, complete; (separate procedure)
- 42.6  ~  42.6  FUD  090
- AMA: 2014, Jan, 11

51575  with bilateral pelvic lymphadenectomy, including external iliac, hypogastric, and obturator nodes
- 52.7  ~  52.7  FUD  090
- AMA: 2014, Jan, 11

51580  Cystectomy, complete, with ureterosigmoidostomy or ureterocutaneous transplantsations;
- 54.7  ~  54.7  FUD  090
- AMA: 2014, Jan, 11

51585  with bilateral pelvic lymphadenectomy, including external iliac, hypogastric, and obturator nodes
- 61.0  ~  61.0  FUD  090
- AMA: 2014, Jan, 11

51590  Cystectomy, complete, with ureteroileal conduit or sigmoid bladder, including intestine anastomosis;
- 55.9  ~  55.9  FUD  090
- AMA: 2014, Jan, 11

51595  with bilateral pelvic lymphadenectomy, including external iliac, hypogastric, and obturator nodes
- 63.3  ~  63.3  FUD  090
- AMA: 2014, Jan, 11

51596  Cystectomy, complete, with continent diversion, any open technique, using any segment of small and/or large intestine to construct neobladder
- 68.1  ~  68.1  FUD  090
- AMA: 2014, Jan, 11

51597  Pelvic exenteration, complete, for vesical, prostatic or urethral malignancy, with removal of bladder and ureteral transplantsations, with or without hysterectomy and/or abdominoperineal resection of rectum and colon and colostomy, or any combination thereof
- FUD
- AMA: 2014, Jan, 11

51600-51720 Injection/Insertion/Instillation Procedures of Bladder

51600  Injection procedure for cystography or voiding urethrocystography
- (74430, 74455)
- 1.29  ~  5.57  FUD  000
- AMA: 2014, Jan, 11

51605  Injection procedure and placement of chain for contrast and/or chain urethrocystography
- (74430)
- 1.11  ~  1.11  FUD  000
- AMA: 2014, Jan, 11

51610  Injection procedure for retrograde urethrocystography
- (74450)
- 1.85  ~  3.21  FUD  000
- AMA: 2018, Jan, 8; 2017, Jan, 8; 2016, Jan, 3; 2014, Jan, 11

51700  Bladder irrigation, simple, lavage and/or instillation
- 0.87  ~  2.12  FUD  000
- AMA: 2014, Jan, 11
Appendix A — Modifiers

CPT Modifiers

A modifier is a two-position alpha or numeric code appended to a CPT® code to clarify the services being billed. Modifiers provide a means by which a service can be altered without changing the procedure code. They add more information, such as the anatomical site, to the code. In addition, they help to eliminate the appearance of duplicate billing and unbundling. Modifiers are used to increase accuracy in reimbursement, coding consistency, editing, and to capture payment data.

22 Increased Procedural Services: When the work required to provide a service is substantially greater than typically required, it may be identified by adding modifier 22 to the usual procedure code. Documentation must support the substantial additional work and the reason for the additional work (ie, increased intensity, time, technical difficulty of procedure, severity of patient’s condition, physical and mental effort required).

Note: This modifier should not be appended to an E/M service.

23 Unusual Anesthesia: Occasionally, a procedure, which usually requires either no anesthesia or local anesthesia, because of unusual circumstances must be done under general anesthesia. This circumstance may be reported by adding adding modifier 23 to the procedure code of the basic service.

24 Unrelated Evaluation and Management Service by the Same Physician or Other Qualified Health Care Professional During a Postoperative Period: The physician or other qualified health care professional may need to indicate that an evaluation and management service was performed during a postoperative period for a reason(s) unrelated to the original procedure. This circumstance may be reported by adding modifier 24 to the appropriate level of E/M service.

25 Significant, Separately Identifiable Evaluation and Management Service by the Same Physician or Other Qualified Health Care Professional on the Same Day of the Procedure or Other Service: It may be necessary to indicate that on the day a procedure or service identified by a CPT code was performed, the patient’s condition required a significant, separately identifiable E/M service above and beyond the other service provided or beyond the usual preoperative and postoperative care associated with the procedure that was performed. A significant, separately identifiable E/M service is defined or substantiated by documentation that satisfies the relevant criteria for the respective E/M service to be reported (see Evaluation and Management Services Guidelines for instructions on determining level of E/M service). The E/M service may be prompted by the symptom or condition for which the procedure and/or service was provided. As such, different diagnoses are not required for reporting of the E/M service on the same date. This circumstance may be reported by adding modifier 25 to the appropriate level of E/M service.

Note: This modifier is not used to report an E/M service that resulted in a decision to perform surgery. See modifier 57. For significant, separately identifiable non-E/M services, see modifier 59.

26 Professional Component: Certain procedures are a combination of a physician or other qualified health care professional component and a technical component. When the physician or other qualified health care professional component is reported separately, the service may be identified by adding modifier 26 to the usual procedure number.

32 Mandated Services: Services related to mandated consultation and/or related services (eg, third party payer, governmental, legislative or regulatory requirement) may be identified by adding modifier 32 to the basic procedure.

33 Preventive Services: When the primary purpose of the service is the delivery of an evidence based service in accordance with a US Preventive Services Task Force A or B rating in effect and other preventive services identified in preventive services mandates (legislative or regulatory), the service may be identified by adding 33 to the procedure. For separately reported services statifically identified as preventive, the modifier should not be used.

47 Anesthesia by Surgeon: Regional or general anesthesia provided by the surgeon may be reported by adding modifier 47 to the basic service. (This does not include local anesthesia.)

Note: Modifier 47 would not be used as a modifier for the anesthesia procedures.

50 Bilateral Procedure: Unless otherwise identified in the listings, bilateral procedures that are performed at the same session should be identified by adding modifier 50 to the appropriate 5 digit code.

Note: This modifier should not be appended to designated “add-on” codes (see Appendix F).

51 Multiple Procedures: When multiple procedures, other than E/M services, Physical Medicine and Rehabilitation services or provision of supplies (eg, vaccines), are performed at the same session by the same individual, the primary procedure/service may be reported as listed. The additional procedure(s) or service(s) may be identified by appending modifier 51 to the additional procedure or service code(s).

Note: This modifier should not be appended to designated “add-on” codes (see Appendix F).

52 Reduced Services: Under certain circumstances a service or procedure is partially reduced or eliminated at the discretion of the physician or other qualified health care professional. Under these circumstances the service provided can be identified by its usual procedure number and the addition of modifier 52, signifying that the service is reduced. This provides a means of reporting reduced services without disturbing the identification of the basic service.

Note: For hospital outpatient reporting of a previously scheduled procedure/service that is partially reduced or cancelled as a result of extenuating circumstances or those that threaten the well-being of the patient prior to or after administration of anesthesia, see modifiers 73 and 74 (see modifiers approved for ASC hospital outpatient use).

53 Discontinued Procedure: Under certain circumstances, the physician or other qualified health care professional may elect to terminate a surgical or diagnostic procedure. Due to extenuating circumstances or those that threaten the well-being of the patient, it may be necessary to indicate that a surgical or diagnostic procedure was started but discontinued. This circumstance may be reported by adding modifier 53 to the code reported by the physician for the discontinued procedure.

Note: This modifier is not used to report the elective cancellation of a procedure prior to the patient’s anesthesia induction and/or surgical preparation in the operating suite. For outpatient hospital/ambulatory surgery center (ASC) reporting of a previously scheduled procedure/service that is partially reduced or cancelled as a result of extenuating circumstances or those that threaten the well being of the patient prior to or after administration of anesthesia, see modifiers 73 and 74 (see modifiers approved for ASC hospital outpatient use).

54 Surgical Care Only: When 1 physician or other qualified health care professional performs a surgical procedure and another provides preoperative and/or postoperative management, surgical services may be identified by adding modifier 54 to the usual procedure number.

55 Postoperative Management Only: When 1 physician or other qualified health care professional performs the postoperative management and another performed the surgical procedure, the postoperative component may be identified by adding modifier 55 to the usual procedure number.

56 Preoperative Management Only: When 1 physician or other qualified health care professional performed the preoperative care and evaluation and another performed the surgical procedure, the preoperative component may be identified by adding modifier 56 to the usual procedure number.

57 Decision for Surgery: An evaluation and management service that resulted in the initial decision to perform the surgery may be identified by adding modifier 57 to the appropriate level of E/M service.
