Chapter 3. Disease of the Blood and Blood-Forming Organs

### D63 Anemia in chronic diseases classified elsewhere

**D63.0 Anemia in neoplastic disease**
- Code first neoplasm (C80-D49)
- Anemia due to antineoplastic chemotherapy (D64.81)
- Aplastic anemia due to antineoplastic chemotherapy (D61.1)

**D63.1 Anemia in chronic kidney disease**
- Erythropoietin resistant anemia (EPO resistant anemia)
- Code first underlying chronic kidney disease (CKD) (N18.-)

**D63.8 Anemia in other chronic diseases classified elsewhere**
- Code first underlying disease, such as:
  - Diphtheria (B70.0)
  - Hookworm disease (B76.8-B76.9)
  - Hypothyroidism (E00.0-E03.9)
  - Malaria (B58.8-B58.9)
  - Symptomatic late syphilis (A52.79)
  - Tuberculosis (A18.89)

### D64 Other anemias

**D64.0 Refractory anemia (D64.6)**
- Refractory anemia with excess blasts in transformation (RAEB T) (C92.8)

**D64.8 Hereditary sideroblastic anemia**
- Sex-linked hypochromic sideroblastic anemia

**D64.1 Secondary sideroblastic anemia due to disease**
- Code first underlying disease, such as:
  - Hypothyroidism (E00.0-E03.9)
  - Malaria (B58.8-B58.9)
  - Symptomatic late syphilis (A52.79)
  - Tuberculosis (A18.89)

**D64.2 Secondary sideroblastic anemia due to drugs and toxins**
- Code first poisoning due to drug or toxin, if applicable (T36-T65 with fifth or sixth character 5)
- Use additional code for adverse effect, if applicable, to identify drug (T36-T50 with fifth or sixth character 5)

**D64.3 Other sideroblastic anemias**
- Sideroblastic anemia NOS
- Pyridoxine-responsive sideroblastic anemia NEC

**D64.4 Congenital dyserythropoietic anemia**
- Dyserythropoietic anemia (congenital)

**D64.8 Other specified anemias**

**D64.81 Anemia due to antineoplastic chemotherapy**
- Antineoplastic chemotherapy induced anemia
- Aplastic anemia due to antineoplastic chemotherapy (D61.1)
- Anemia in neoplastic disease (D63.0)

**D64.89 Other specified anemias**
- Infantile pancytopenia

### D65 Disseminated intravascular coagulation [defibrination syndrome]

- A fibrinogenemia, acquired
- Consumption coagulopathy
- Diffuse or disseminated intravascular coagulation (DIC)
- Fibrinolytic hemorrhage, acquired
- Fibrinolytic purpura
- Purpura fulminans

**D65.1 Disseminated intravascular coagulation [defibrination syndrome]**
- Disseminated intravascular coagulation (complicating): abortion or ectopic or molar pregnancy (O08-O07, O08.1) in newborn (P68), pregnancy, childbirth and the puerperium (O45.8, O46.8, O67.8, O72.3)

### D66 Hereditary factor VIII deficiency

- Classical hemophilia
- Deficiency factor VIII (with functional defect)

### D67 Hereditary factor IX deficiency

- Christmas disease
- Factor IX deficiency (with functional defect)

### D68 Other coagulation defects

**D68.0 Abnormal coagulation profile (R79.1)**
- Coagulation defects complicating abortion or ectopic or molar pregnancy (O08-O07, O08.1)
- Coagulation defects complicating pregnancy, childbirth and the puerperium (O45.8, O46.8, O67.8, O72.3)

**D68.1 Hereditary factor XI deficiency**
- Hemophilia C
- Plasma thromboplastin antecedent [PTA] deficiency

**D68.2 Hereditary deficiency of other clotting factors**
- Ac globulin deficiency
- Congenital afibrinogenemia
- Deficiency of factor I [Fibrinogen]
- Deficiency of factor II [prothrombin]
- Deficiency of factor V [labile]
- Deficiency of factor VII [stable]
- Deficiency of factor X [Stuart-Prower]
- Deficiency of factor XII [Hageman]
- Deficiency of factor XIII [fibrin stabilizing]
- Dysfibrinogenemia (congenital)
- Hypoproconvertinemia
- Owens’ disease
- Proaccelerin deficiency

### D68.3 Hemorrhagic disorder due to circulating anticoagulants

**D68.31 Hemorrhagic disorder due to intrinsic circulating anticoagulants, antibodies, or inhibitors**
- Acquired hemophilia
- Autoimmune hemophilia
- Autoimmune inhibitors to clotting factors
- Secondary hemophilia
Chapter 10. Diseases of the Respiratory System

Chapter Specific Guidelines with Coding Examples
The chapter specific guidelines from the ICD-10-CM Official Guidelines for Coding and Reporting have been provided below. Along with these guidelines are coding examples, contained in the shaded boxes, that have been developed to help illustrate the coding and/or sequencing guidance found in these guidelines.

### a. Chronic obstructive pulmonary disease (COPD) and asthma

#### 1) Acute exacerbation of chronic obstructive bronchitis and asthma

The codes in categories J44 and J45 distinguish between uncomplicated cases and those in acute exacerbation. An acute exacerbation is a worsening or a decompensation of a chronic condition. An acute exacerbation is not equivalent to an infection superimposed on a chronic condition, though an exacerbation may be triggered by an infection.

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>J28.2</td>
<td>Acute bronchitis due to streptococcus</td>
</tr>
<tr>
<td>J44.0</td>
<td>Chronic obstructive pulmonary disease</td>
</tr>
<tr>
<td>J44.1</td>
<td>Chronic obstructive pulmonary disease with acute exacerbation</td>
</tr>
</tbody>
</table>

#### 2) Sequencing of acute respiratory failure and another acute condition

Respiratory failure may be assigned as a principal diagnosis when it is the condition established after study to be chiefly responsible for occasions the admission, and the selection is supported by the Alphabetic Index and Tabular List. However, chapter-specific coding guidelines, such as poisoning, that provide sequencing direction take precedence over these general guidelines, such as poisoning, that provide sequencing direction take precedence.

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>T48.2XA</td>
<td>Poisoning by other opioids, accidental (unintentional), initial encounter</td>
</tr>
<tr>
<td>J96.80</td>
<td>Acute respiratory failure, unspecified whether with hypoxia or hypercapnia</td>
</tr>
</tbody>
</table>

Explanation: Respiratory failure may be assigned as a principal diagnosis when it is the condition established after study to be chiefly responsible for occasions the admission, and the selection is supported by the Alphabetic Index and Tabular List. However, chapter-specific coding guidelines, such as poisoning, that provide sequencing direction take precedence. When coding a poisoning or reaction to the improper use of a medication (e.g., overdose, wrong substance given or taken in error, wrong route of administration), first assign the appropriate code from categories T36–T50. Use additional code(s) for all manifestations of the poisoning. In this instance, the respiratory failure is a manifestation of the poisoning and is sequenced as a secondary diagnosis.

### b. Acute respiratory failure

#### 1) Acute respiratory failure as principal diagnosis

A code from subcategory J96.0, Acute respiratory failure, or subcategory J96.2, Acute and chronic respiratory failure, may be assigned as a principal diagnosis when it is the condition established after study to be chiefly responsible for occasioning the admission to the hospital, and the selection is supported by the Alphabetic Index and Tabular List. However, chapter-specific coding guidelines (such as obstetrics, poisoning, HIV, newborn) that provide sequencing direction take precedence over these general guidelines, such as poisoning, that provide sequencing direction take precedence.

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>J45.42</td>
<td>Moderate persistent asthma with status asthmaticus</td>
</tr>
</tbody>
</table>

### c. Influenza due to certain identified influenza viruses

Code only confirmed cases of influenza due to certain identified influenza viruses (category J89), and due to other identified influenza virus (category J18). This is an exception to the hospital inpatient guideline Section II, H. (Uncertain Diagnosis).

In this context, "confirmation" does not require documentation of positive laboratory testing specific for avian or other novel influenza A or other identified influenza virus. However, coding should be based on the provider's diagnostic statement that the patient has avian influenza, or other novel influenza A, for category J89, or has another particular identified strain of influenza, such as H1N1 or H3N2, but not identified as novel or variant, for category J10.

If the provider records "suspected" or "possible" or "probable" avian influenza, or novel influenza, or other identified influenza, then the appropriate influenza code from category J11, Influenza due to unidentified influenza virus, should be assigned. A code from category J89, Influenza due to certain identified influenza viruses, should not be assigned nor should a code from category J10, Influenza due to other identified influenza virus.
