The Claims Batch Editor Add-on, only available for EncoderPro.com Expert and EncoderPro.com for Payers, is a sophisticated and easy-to-use claims review tool for physician claims. Using proven coding rules and logic from Optum360® ClaimsManager, the Claims Batch Editor Add-on is designed to work within the customer’s current workflow to identify inappropriately coded physician claims before they are submitted to payers, assisting with first-pass payment.

This includes commercial (common coding rules most commercial payers recognize from sources like the AMA and AHA), Medicare and even state-level Medicaid coding rules and guideline review. With thousands of coding edits you can ensure proper application of modifier use, CCI, LCD/NCD, age, gender, add-on codes, ICD-10-CM (code first, code additional and excludes 1 and 2) and more. Every edit is sourced back to the proper coding organization that owns the codes and rules (e.g., AMA, CMS, etc.). Optum360 frequently updates edits to ensure you are getting the most relevant edit information.

The EncoderPro.com Expert compliance editor tool allows you to upload the 837 claim file prior to submission to your clearing house and in a few seconds you can see all the suggested claim edits for you to make before submission, which helps improve first-pass payment.

**Key features and benefits**

- Reduce rejections/denials
- Increase payment turnaround speed
- Improve compliance
- Streamline your revenue cycle
- Reduce administrative costs

**Item number:**
WA16

**Price:**
$500.00 per user, multiple-user pricing available.
